Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

With regards to the disclosure stipulating that the "setpoint temperature of said semiconductor substrate is controlled according to the specific resistance at the aforementioned room temperature so that the surface temperature of the substrate reaches a desired temperature regardless of the specific resistance of said substrate" in claim 1, the relative relationships between the "setpoint temperature," the "surface temperature of the substrate" and the "desired temperature" therein are unclear. Likewise, with regards to the disclosure stipulating that the "setpoint temperature of said semiconductor substrate is controlled according to the specific resistance at the aforementioned room temperature," the relationship between the control of the "setpoint temperature" and the "specific resistance" is unclear; therefore, the manner in which the setpoint temperature is controlled according to the specific resistance is also unclear.
